If high heating bills make you feel like you're burning money... **GO HYBRID!**

New Hybrid Heat systems can save \$1,000 to \$3,000 a year in heating bills – **EVEN AS AN ADD-ON TO YOUR EXISTING SYSTEM!**

Now, hybrid technology is not just for cars. It's for home heating too! In comparisons, Hybrid Heat **saved homeowners \$1,000 to \$3,000** a year in heating costs—even over other new systems! It even doubles as a central air conditioner, keeping you comfortable year-round—saving on AC costs as well. Whether your heating system is a year old or twenty years old, Hybrid Heat can substantially reduce your heating and cooling bills—even as an add-on to your existing system. And right now, we're introducing these systems with a very special offer.

For a limited time, purchase a complete new Hybrid Heat system and we'll pay the first \$500 of your heating bill this winter. And with our easy payment plans and the money you save on your heating bill, your new Hybrid Heat system may even pay for itself!

Ask your technician to schedule a Free Home Heating Analysis to find out how much you could save in heating costs.

LIMITED TIME OFFER!
SAVE \$500 OR GET 12 MONTHS NO PAYMENTS ON A COMPLETE NEW HYBRID HEATING SYSTEM.*

SATISFACTION GUARANTEE - If we are unable to maintain your complete satisfaction with our products and workmanship, we'll remove our system and refund you 100% of the purchase price.

*May not be combined with any other offer. Some restrictions apply. During the first year of ownership. Call for details.

Distressed By Rising Fuel Prices?

Check out the new **HYBRID** Heat System on the reverse side!

We are too. That's why we wanted to help educate you on a few products that can help take the sting out of rising energy bills this winter. These products are designed to use less energy while keeping you and your family comfortable – and when you can do both and save money too, this heating season may not be that bad.

SMART Controls for Your Heating System

Most heating systems are not very smart. Regardless of the temperature outside, they only know to operate at one capacity whenever the thermostat calls for heat – High and Hot. With this control, information retrieved from an outdoor sensor is used to regulate the heat output of your boiler based on actual outdoor temperature - more heat when it's cold, less heat when it's warmer. By adding this system to your boiler and thermostat, you could see energy savings up to 30%.

Programmable Thermostats

When you're in control, you save energy, thus saving money. With a programmable thermostat you can automatically lower the temperature setting during periods of time that best fit your family's lifestyle. Lowering your thermostat just 5 degrees during evening hours and/or while away from the home can save you up to 7% on your heating bills.

Whole House Humidifiers

Just like the warmer days of summer, when water is added to the air, it feels warmer – water retains heat. Using a whole house humidifier adds just the right amount of water to the air in your home. This actually allows you to maintain a certain level of comfort while keeping your thermostat at a lower temperature. You'll take the dry feeling out of the air and enjoy a good feeling when you see your reduced heating bills.

Indirect Fired Water Heaters

Plenty of hot water and energy savings too! These use your boiler as the heat source by circulating hot water from the boiler through a heat exchanger in a well-insulated water heater tank. An indirect water heater is one of the best options because it eliminates the tremendous flue losses associated with gas-fired storage water heaters but without the hassles and extra costs of tankless gas water heaters. When used with a modern, high-efficiency boiler, these energy savings hold true even in the summer when your boiler isn't needed for heat.

Ask your technician for more details on any of these products.
